Thank you

I did a study on foul balls at Memorial Field on the Thompson Street side, netting from back stop at field 2 to third base side to outfield I recommend a steel guide wire attached to a pole in the outfield and netting within. I also did a study on the Baseball Field and feel there are 2 options, #1 move the backstop closer to home plate and adding an 8ft x 32ft (approximately) vertical fencing attached to the original backstop. Option # 2 add 2 10ft or 12 ft extension pole by dugout areas with netting attached to restrict foul balls.
